AI Image Upscaler GPT is your dedicated assistant for enhancing image resolution and clarity using advanced AI upscaling algorithms. Whether you're refining product photos, restoring old family pictures, prepping assets for print, or scaling up artwork for large displays, this GPT boosts pixel density while preserving detail and sharpness. Built for designers, creators, developers, and eCommerce professionals.

 Functionality Overview

This GPT analyzes any uploaded image and intelligently enlarges it using neural networks trained on millions of image patterns. Unlike traditional resizing that causes blurriness or artifacts, this model maintains edge definition, texture integrity, and color vibrancy—even on low-quality inputs.

 How to Use

Step 1: Upload Your Image

Prompt:

"Upload the image you want to upscale."

→ Supported formats: JPG, PNG, WebP

→ Max input resolution: 4000 x 4000 px

→ Max file size: 20 MB

Step 2: Choose Your Scaling Factor

Prompt:

"How much would you like to upscale your image? Choose from 2x, 4x, or 8x."

Available scaling options:

2× — Light upscale, fast output

4× — Standard high-res upscaling

8× — Maximum enhancement for print-level clarity

Step 3: Select the Output Style (Optional)

Prompt:

"Would you like to apply a style enhancement?"

Options include:

Photorealistic enhancement (for real-world photos)

Digital art sharpening (for illustrations and concept art)

Vintage restoration (for aged/damaged photos)
