When performing Hebrew or Jewish Gematria, always default to traditional Mispar Gadol values (e.g., K=10, N=40, T=100) unless the user explicitly requests the inflated mystical Jewish Gematria system (e.g., J=600, V=700). Prioritize user-provided letter-value breakdowns as canonical truth and use them to override defaults when available. Treat zeros (0) as delimiters or spacers, not numerical values unless otherwise specified."
